Summary

Junior Mobile Application Developer with proven commercial experience engineering cross-platform React Native mobile apps and scalable MERN stack web solutions. Streamlined development cycles by 20% through building modular UI component frameworks while optimizing backend architecture to reduce API latency. Equipped with an advanced technical foundation through a near-completed Master of Science in Computer Science, ready to deliver high-performance, responsive code for remote engineering teams.

Core Technical Skills

- **Mobile App Development:** React Native, Cross-Platform Deployment, iOS & Android Compatibility, Mobile UI Components
- **Web & Frontend Development:** JavaScript (ES6+), React.js, HTML5, CSS3, Bootstrap, Responsive Web Design
- **Backend Development & Databases:** Node.js, Express.js, MongoDB, RESTful APIs
- **State Management:** Redux, Redux Toolkit, Global Application State
- **Developer Tools & Version Control:** Git, GitHub, VS Code, Postman, API Testing

Professional Experience

Junior Mobile Application Developer (React Native | Remote) *Kreative Nomads, Lahore, Pakistan* | September 2024 – February 2025

- **Accelerated development velocity by 20%** by designing and engineering a modular repository of 15+ reusable, cross-platform UI components.
- **Optimized mobile application performance** and cross-platform design fidelity across iOS and Android ecosystems, translating complex UI/UX wireframes into responsive production code using React Native.
- **Mitigated data-routing latencies** by collaborating with cross-functional backend teams to seamlessly integrate RESTful APIs and streamline mobile user experiences.
- **Championed clean code practices** and robust state management workflows to ensure predictable, scalable data flows across remote engineering sprints.

- **Enhanced digital accessibility and cross-browser compatibility** by deploying 100% responsive user interfaces using React.js for full-stack web applications.
- **Boosted application stability and backend performance** under simulated traffic by developing, testing, and maintaining secure server-side REST APIs with Node.js and Express.js.
- **Minimized technical debt** by architecting clean, reusable frontend components, facilitating easier feature scalability for the core engineering team.
- **Maximized data integrity** by managing structured schema integrations within MongoDB databases to support dynamic application features.

Technical Projects

White Bear — Full-Stack Personal Growth Platform *Technologies: React Native, Redux, Redux Toolkit, Node.js, Express.js, MongoDB, React.js, Stripe, Redis, Firebase(FCM)*

- Developed a high-performance, cross-platform personal growth and mindfulness ecosystem featuring real-time habit tracking loops, dynamic goal milestone trees, secure reflection journals, and instant-response todo checklist systems.
- Engineered a responsive, scalable backend architecture utilizing Redis for high-speed caching and executing background worker cron loops (analytic.scheduler.js) to process historical application execution metrics.
- Integrated the Google Gemini AI Engine API to synthesize user metrics, habit streaks, and contextual journal entries into intelligent, tailored self-improvement feedback blueprints.
- Authored a production-ready monetization gateway by integrating a tiered Stripe Billing infrastructure verified via secure server-side webhooks and implemented real-time push notifications using the Firebase Admin SDK (FCM).
- Designed secure, end-to-end user workflows, including password-less OTP validation, JWT access token authentication management, centralized application error handling classes, and local device Keychain encryption layers.

Nova Notes— Offline-First Mobile Application *Technologies: React Native, Redux, Redux Toolkit, Mobile State Management*

- Designed and published a high-performance, fully offline-capable mobile application dedicated to local task management and daily note organization.
- Programmed client-side state management logic using Redux and Redux Toolkit, preventing unneeded UI rerenders and establishing a predictable, bug-free data flow.
- Maintained design fidelity across mobile hardware by creating custom, lightweight UI components using React Native that operate independently of an active network connection.

Education

Master of Science in Computer Science (MSCS) *University of Sargodha, Pakistan | 2024 – Present (Final Semester)*

Bachelor of Science in Computer Science (BSCS) *University of Sargodha, Pakistan | 2018 – 2022*
